Do you grind or clench your teeth?

Bite splints can change the lives of patients who struggle with grinding or clenching their teeth by alleviating pain and preventing further destruction of existing healthy teeth.

Benefits of Bite Splints:

- Relieves neck, jaw, and head pain
- **Protects** healthy teeth from damage
- Virtually invisible while in the mouth
- Speech is **not affected** by this device
- Can be worn during the day or night

Soft polyurethane inner layer rests comfortably against teeth and gums

- **Ideal for patients** with metal or acrylic allergies
- Available in any color of the rainbow, glow in the dark, glitter, or clear
- Worn on **upper or lower** teeth

Splint™

- Ideal for patients with metal or acrylic allergies
- Rests comfortably against teeth and gums
- Speech is not affected by this device
- Practically invisible in the mouth
- Worn on upper or lower teeth

Before inserting, place the splint in hot water (approximately 150F) for one minute to make it flexible, easier to insert, and increase patient comfort.

- **Protects** healthy teeth from damage
- Virtually invisible while in the mouth
- Speech is **not affected** by this device
- Can be worn during the day or night

- Fabricated from a dense acrylic resulting in less acrylic fractures
- Resistance to yellowing, shrinkage, and porosity
- Rests comfortably against teeth and gums
- Virtually unnoticeable, patients can speak comfortably
- Worn on upper or lower teeth
